EnergyTrak 3.2.0.0 Release Notes

Release Versions

The below stable versions are the most recent at the time of initial release:

EnergyTrak Gateway:	3.1.0.4
Android Mobile App:	3.2.0 (614)
iOS Mobile App:	3.2.0 (614)
Web App:	3.2.0 (616)

What's New in EnergyTrak 3.2.0

This release brings powerful tools and enhancements to keep you connected and confident in your energy system:

- **Push Notifications (Public Beta):** In-app push notifications for the EnergyTrak mobile app are now available. These can be toggled on from the Notifications settings screen.

  - *Public Beta* means we are releasing unfinished features to all users to gather feedback.

- **Web App Now Available (Public Beta):** Access EnergyTrak from your computer at energytrak.io! Our web app puts control at your fingertips, whether you're at home or on the go, with the same dependability you expect from Briggs & Stratton. As we strive for simplicity, you can use the same login for the web app as you use for the mobile app.

- **Map View (Public Beta):** See your sites like never before with an interactive map, now available on the web app (accessed by navigating to energytrak.io from a desktop browser). Pinpoint your equipment's location and status with ease—because knowing what's happening is the first step to staying prepared.

  - Note that *Map View* is not yet available in the EnergyTrak mobile app.

- **Wi-Fi Signal Strength Insights:** During setup of the EnergyTrak Gateway, see your Wi-Fi signal strength to ensure a viable connection from the start.

- **Text Selection Made Simple:** Copy addresses, serial numbers, or other details effortlessly with selectable text fields—small details that make a big difference.

- **Gateway Health Status Upgrades:** Improved logic gives you a clearer, more reliable view of your EnergyTrak Gateway's health.

- **Smarter Email Notifications:** Links in email alerts now take you straight to the relevant site in the app—because every second counts when you need to act.

- **Faster Notifications Screen:** Load times are snappier when accessing the notifications settings.

These updates reflect our ongoing work to deliver on our promise: a resilient, stable energy solution you can count on, backed by technology that's as dependable as our generators and batteries.

Upcoming Improvements

We're already working on the next wave of enhancements to make your experience even stronger:

- **Beta Refinement** will continue for all of our pre-production features, including the *Web App*, *Map View*, and *Push Notifications*.

- **Enhanced Event Log:** Improved insights into your system's history and performance.

- **Battery Fault Details:** More guidance on identifying and resolving battery issues.
